### DETAILED ACTION

The Amendment, filed on May 27, 2003 has been entered and is acknowledged by the Examiner.

Cancellation of claim 5 has been entered.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 4,904,896 to Chiang.

Regarding claim 1 Chiang discloses (column 4 lines 30-42, Fig. 3) cathode employed in a cathode ray tube for emission of electrons comprising a sleeve 25 and a cap 27 containing mainly nickel (more than 95 weight %) and about 0.1 weight % of magnesium.

Referring to claim 2, Chiang discloses weight concentration  $C_{Mg}$  of magnesium 0.1% and zero weight percentage of aluminum  $C_{Al}$  which satisfies the relation between  $C_{Mg}$  and  $C_{Al}$  as claimed.

Referring to claim 3 the percentage of the surface covered by the stable crystallites below the emissive layer of the cathode can include 0 % which is implicitly disclosed by Chiang because the absence of aluminum would result in null percentage of crystallites formed, covering the surface of the cathode.

Art Unit: 2879

Regarding claim 4 Chiang discloses (claims 1,9) the metal substrate includes a layer of emissive material consisting of essentially alkaline earth-metal oxides.

***Response to Arguments***

Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.
